MENS MERCATUS · ARCHITECTURE

RAG, an agent, and a desk of three

Three ways a question becomes an answer. Assist is the retrieval path. JobNet is the agent path. The nightly script runs the three jobs in one process.

RAG

Retrieve, then answer

Question → embedding → case-study passages → passage plus question → model. The reply names the passage.

AGENT

Decide, then use a tool

Listing → memory of sends → ranker and mailbox check → posting text → sent or held. No address is invented.

MULTI-AGENT

One desk, three workers

Shortlist → aggregator (one role per company) → rank → evidence line → send gate. Report at 15:00 SAST.

WHAT IS LIVE

Assist matches a question to JobNet, Mercatus Assist, THINK, Forex, and SoundX before Gemini answers. JobNet embeds the posting, keeps one role per company, and mails a letter only when the posting prints an employer address. SoundX reads onsets in the local buffer.
Education: self-taught.
