.NET — SOUTH AFRICAN SOCIAL APP
PRODUCT PORTFOLIO · POP EDITION
TURNS COMMUTES & QUEUES INTO INCOME

.net

South African Social App · Product Portfolio · v2 Pop Art

Turns every commute and queue into income and connection.

One coherent product: social graph, work rails, wallet, and agentic intelligence — not a pile of side apps.

Senior AI Agent / Developer / Scientist
Architecture · Security · ML systems · Product design

. ThinkPulse	. Encrypted chat	. Live A/V	. AI mini-sites
. Code terminal	. Wallet credits	. Gig matching	. Anonymous queues
. Voiceprint	. Trust meters	. Agentic AI	. ZAR tipping
. Health-twin	. Escrow hub	. Bookings/SEO	. POPIA-first

Palette: RED · BLACK · WHITE | Stack: ASP.NET Core · EF Core · mobile clients · agent mesh

01 · PRODUCT THESIS & SCOPE CONTROL

One platform, many surfaces

.net is a South African social-economic OS for everyday life: stay connected on ThinkPulse, earn on the move (deliveries, vehicle gigs, queue-standing), move value through a capped discount-credit wallet and ZAR tips, and interact with agentic AI that books, builds mini-sites, and protects trust — without fragmenting into unrelated products.

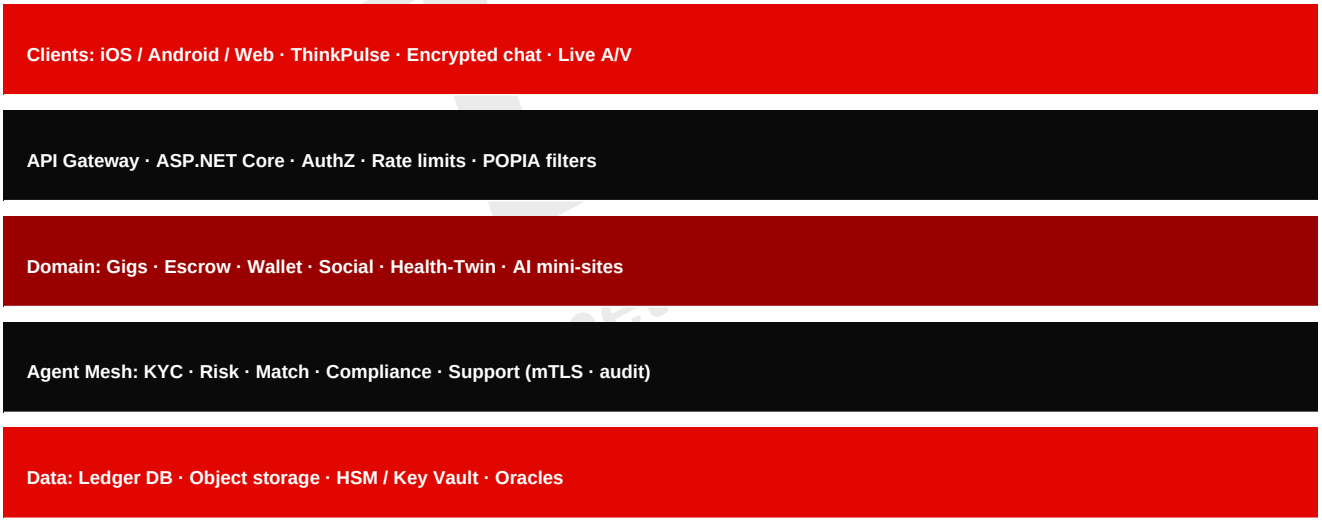

Scope control: Every feature shares identity, wallet, trust meter, and compliance spine. New ideas must attach to that spine or wait.

FEATURE MAP

SURFACE	WHAT USERS DO	TRUST / MONEY
ThinkPulse	Social feeds, discovery, creator pulses	Tips in ZAR; reputation
Chat + Live A/V	E2E chat; voice/video sessions	Encrypted; optional voiceprint
Gigs / Delivery	Vehicle owners match jobs; negotiate; deliver	Escrow + cling-confirm
Anonymous queues	SASSA / clinic stand-in without PII leak	Aliases + voiceprint
Wallet	Forgone retailer discounts → credits; P2P	Cap R2,500–R3,000
AI mini-websites	Generate bookable pages + SEO assists	Tied to verified identity
Terminal	In-app code/dev terminal for builders	Sandboxed; audited
Health-twin	Personal intelligence layer (opt-in)	POPIA; separate vault

02 · SYSTEM ARCHITECTURE

Layered · agentic · ZAR-native

Data flows through a single API gateway. Money never moves on agent recommendation alone: escrow actions require multi-party approval. PII for anonymous gigs stays in an internal KYC vault; client APIs see opaque aliases only.

03 · ESCROW STATE MACHINE

Central hub · double-entry · confirm-to-release

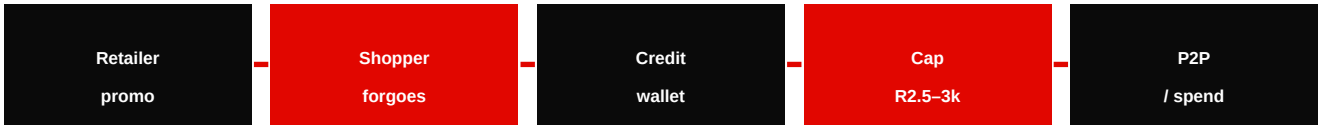

Poster and freelancer lock an AcceptedPrice, poster funds the hub, delivery completes via cling-to-confirm (phones together) plus photo proof (QR/PIN fallback). Recipient confirmation releases funds. Disputes freeze the ledger for admin policy.

Guards: idempotency · row-version concurrency · double-entry ledger · cling-to-confirm + photo proof

Refund: Funded/Disputed → PartiallyRefunded / FullyRefunded → Closed | AI recommends; quorum executes

WALLET CREDIT FLOW

Idempotent till-slip claims · AML velocity limits · EscrowHeld ≠ Spendable

BIOMETRIC TRUST METER

Inputs: voiceprint · liveness · rating floor · KYC tier · disputes · delivery confirms

Outputs: HighValue eligibility · escrow limits · anonymous-queue privileges · tip visibility

04 · FOUR-MONTH CYBERSECURITY ROADMAP

Depth-first · ASP.NET Core · adversarial ML · POPIA

MO	FOCUS	OUTCOME
1	Threat modeling, OWASP Top 10, ASP.NET Core hardening (validation, authn/z, secrets, HTTPS, CORS, rate limits)	Threat model + hardened API baseline
2	Adversarial ML: prompt injection, poisoning, theft, evasion; secure agent tool-use	Agent policy + ML threat matrix
3	Escrow/wallet integrity, race/replay defenses, POPIA for SA ID & biometrics, anonymous matching, secure photo storage	Applied controls design + tests
4	Authorised labs (TryHackMe/HTB/DVWA), bug-bounty literacy, portfolio case studies, investor trust narrative	Write-ups + security pitch

Ethics: offensive practice only on authorised labs and owned staging. Companion: cybersecurity-roadmap.pdf.

05 · TWENTY AI / ML / AGI FEATURE IDEAS

Tailored to .net — attach to the spine

01. MatchPilot — Agent proposes gig matches from route, vehicle class, rating floor, and live demand.

02. NegotiatorBot — Constrained counter-offer suggestions within escrow-safe price bands.

03. FraudSense — Graph + velocity model on wallet P2P, till-slip claims, and rating rings.

04. ProofCheck — Vision model scores delivery photos; flags ID/face leakage on anonymous gigs.

05. VoiceGate — Voiceprint verify for queue-stand completion without revealing phone/ID.

06. TrustOracle — Fuses biometrics, disputes, confirms into trust meter for HighValue eligibility.

07. PulseRank — ThinkPulse feed ranking with anti-manipulation and local SA context.

08. MiniSiteGen — Agent drafts bookable AI mini-websites + SEO metadata for creators/SMEs.

09. BookSmart — Scheduling agent for bookings tied to mini-sites and calendar holds.

10. RouteTwin — Commute twin suggesting profitable detours for delivery gigs.

11. QueueAngel — Anonymous SASSA/clinic matching with urgency and fairness constraints.

12. HealthTwin Lite — Opt-in wellness insights; hard POPIA boundary from social graph.

13. TipCoach — Suggests ZAR tip norms by gig type without shaming low-income users.

14. EscrowGuard — Anomaly detection on state-machine transitions; freezes suspicious releases.

15. PromptFence — Indirect prompt-injection defenses on job text before agent tool calls.

16. CodeBuddy — Sandboxed terminal assistant for builders inside .net (no prod credentials).

17. DisputeBrief — Summarises evidence packs for human moderators; never auto-pays.

18. LangBridge — Realtime SA multilingual assist in chat with privacy mode.

19. DemandHeat — City-level heatmaps for gig demand; privacy-aggregated only.

20. InvestorPulse — Internal metric agent: trust KPIs, escrow integrity, POPIA incidents.

AGENTIC AI LAYER

Agents propose; money and unfreeze require quorum. Append-only logs with reason codes.

06 · LOGO CONCEPT PLACEHOLDERS

Boardroom ↔ street · holding identity

Twenty numbered mark explorations (geometric monograms, neural nets, waveform–circuit hybrids, candlestick–AI motifs, shields, typographic glyphs) plus a top-10 luxury–sport sheet (navy/gold heritage adapted conceptually). Placeholders below for portfolio continuity; full-colour sheets ship as companion PNGs.

Select 2–3 finalists for “.net” wordmark pairing and apparel mock tests.

07 · CLOSING

Portfolio attribution

This portfolio presents .net as a single South African social-economic platform: commute and queue time become income; relationship and reputation become rails for escrowed work; agentic AI amplifies matching and trust without silently moving money.
